DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 102(a) as being anticipated by Komiyama (USPN 6457627).

Komiyama teaches a tapered wire bonding capillary comprising a face angle of up to 15 degrees and a height approximately equal to the wire thickness (figure 7B and col 6 lines 7-32) and a method of wire bonding with the capillary wherein a load of 490 mN to 980 mN is applied (col 6 lines 7-10). The size of the capillary relative to the device to be bonded will depend on the size of the device or chip. Micron size chips are known in the art.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Fogal (USPN 5662261).

Fogal teaches a tapered wire bonding capillary comprising a face angle of up to 15 degrees and a height approximately equal to the wire thickness (figures 1 and 6 and col 2 line 35 – col 3 line 6) and a method of wire bonding with the capillary. The size of

Application/Control Number: 10/649,654

Art Unit: 1725

the capillary relative to the device to be bonded will depend on the size of the device or chip. Micron size chips are known in the art.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Levintov et al. (USPN 4405074).

Levintov teaches a tapered wire bonding capillary comprising a face angle of up to 15 degrees and a height approximately equal to the wire thickness (figure 4, col 3 lines 30-36 and col 4 lines 22-27). The size of the capillary relative to the device to be bonded will depend on the size of the device or chip. Micron size chips are known in the art.

Response to Arguments

- 5. In response to applicant's argument that Komiyama and Fogal do not address the issue of preventing detachment of a wire, the fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).
- 6. In response to applicant's argument that the capillary is wider than the device to be bonded and does not perform bonding in a particular order, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed

Application/Control Number: 10/649,654 Page 4

Art Unit: 1725

invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

- 7. Therefore the 102 rejection of claims 1 and 2 as anticipated by Komiyama stands.
- 8. Therefore the 102 rejection of claims 1 and 2 as anticipated by Fogal stands.

Allowable Subject Matter

- 9. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 10. Claims 6-8 are allowed.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wykes et al. (USPN 5764074, micron size chips), Tadauchi

Art Unit: 1725

(USPN 6673310 B2, 500 micron bonding wire) and Koide et al. (USPN 4901550, 100 to 300 micron bonding wire).

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynne Edmondson whose telephone number is (571) 272-1172. The examiner can normally be reached on Monday through Thursday from 6:30 a.m. to 5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
